DETAILED ACTION

Status of the Application

Claims 1-15 are allowed.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior art does not show or fairly suggest the claimed invention of an autostereoscopic multi-user display having the claimed limitations.

Barnea (US. Pat. 5,771,066) and **Travis** (US. Pat. 5,132,839) are the most relevant prior arts of record.

Barnea discloses in second embodiment (i.e. Fig. 2) an autostereoscopic multi-user display having a sweet-spot unit that is direction- controlled by a tracking and image controller 30, wherein the sweet-spot unit has an illumination matrix 26 that includes a multitude of illumination elements these can be activated individually (i.e. 32, 34), and an imaging device 21 having lens elements (i.e. lenticular array 21) for imaging alternately active illumination elements in the form of directed bundles of rays onto extended sweet-spots which correspond with different eye position, so that right and left images of a stereoscopic image sequence provided on a transmissive image display matrix 22 (i.e. in first embodiment, Fig. 1) can be rendered visible at right/left eye positions (i.e. 12 and 14) of observer 10, whereby the tracking and image controller 40 defines a direction for each bundle of rays (37 and 39) by activating at least one illumination element of the illumination matrix 26 per eye position , lens element (i.e. lenticular array 21) and line, so that all bundles of rays (i.e. 37 and 39) coincide at the position of that sweet-spot, wherein the imaging device 21 comprises: an imaging means having a multitude of lens element (i.e. lenticular array 21 with short focal distance, so that the active illumination elements are imaged onto the sweet-spots in an enlarged fashion, and

a field lens 20 which is disposed behind the imaging means 21 in the direction of light propagation and which has a much longer focal distance than the lens elements (i.e. lenticular array 21), in order to keep constant and at a minimum the distance between adjacent bundles of rays (i.e. 37, 38), so that the definition of directions of the bundles of rays is supported with the illumination matrix 26 (first embodiment, second embodiment, Fig. 1 and Fig. 2).

Travis discloses a three dimensional autostereoscopic display device comprising image controller 99, image display matrix (i.e. spatial light modulator 2), illumination matrix (i.e. beam scanner 16), imaging device (i.e. lensticular 3), and a field lens 1, which is disposed behind the imaging device (i.e. lensticular 3) in the direction of light propagation from light source 15 (Fig. 5 and 6).

Regarding **claim 1**, **Barnea** and **Travis** alone or in combination, however, still fail to render a teaching of a field lens that is disposed behind the imaging device (lenticular array) and sweet-spots are generated for multiple users and stereo images are displayed for multiple users sequentially. This also “enlarge the tracking range for multiple users, to reduce aberrations at the same time and to enhance the quality of displaying 3D objects and of illuminating the display, realizing all these features in a flat design”.

Therefore in light of the applicant’s amendment/arguments, claim 1 is allowable as distinguishes over the prior art of record because of the reason stated above. It is this examiner’s position that prior art taken alone, fails to disclose or render obvious in combination with the rest of the limitations of the base claim.

Claims 2-15 are allowable as dependent claims of claim 1.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
